

JOMAR CARL LACIERAS

COMPUTER ENGINEER

PERSONAL PROFILE

Motivated and adaptable Software Engineering intern with hands-on experience in developing real-world web applications. Demonstrates strong problem-solving skills through building and troubleshooting a full-stack ISP management system. Capable of handling both frontend and backend development, as well as server configuration and deployment. Quick learner who can work independently, debug complex issues, and continuously improve system performance and user experience.

SKILLS AND EXPERTISE

- Full-stack web development (PHP, MySQL, HTML, CSS, JavaScript)
- Backend logic implementation and debugging
- Database design, queries, and relationship handling
- Linux server setup and management (Ubuntu, Apache)
- System deployment and configuration
- Troubleshooting errors (server, database, routing)
- UI/UX improvement and responsiveness
- Version control basics (Git)
- Problem-solving and analytical thinking
- Ability to learn and adapt quickly to new technologies

LANGUAGES

- English (Fluent)
- Filipino (Intermediate)

EDUCATIONAL HISTORY

Bachelor of Science in Computer Engineering

Batangas State University - The National Engineering University | 2022 - 2026

- Built a complete system from setup to deployment
- Practiced managing data securely and efficiently

Senior High School

Science, Technology, Engineering and Mathematics (STEM) | 2020 - 2022

- Two consecutive years on the Honor's List.
- Awarded the Most Innovative at the Annual Programming Exhibit.

(OJT / INTERNSHIP)

- Designed and developed a web-based system for managing users, data, and transactions
- Implemented backend functionalities including authentication, data processing, and system logic
- Managed and configured a MySQL database, including handling errors and fixing data issues
- Deployed and maintained the system on a Linux (Ubuntu) server using Apache
- Diagnosed and resolved real-world issues such as server crashes, database connection failures, and routing errors
- Improved system performance by debugging and optimizing existing code
- Integrated external services such as email notifications using SMTP
- Worked on both administrative and user-facing features, ensuring usability and functionality
- Applied critical thinking to solve unexpected system problems during development and deployment
